SUMMARY

An AI/ML Engineer with practical experience in developing backend APIs and generative AI apps in Python. Proficient in building and shipping production-grade machine learning models and solutions with a good understanding of the underlying mathematical concepts. Have experience with FastAPI, RAG pipelines for developing prototype applications.

EDUCATION

B.E. Artificial Intelligence and Machine Learning Bahubali College of Engineering, Shravanabelagola	2023 - 2027
Class XII – Karnataka State Board St. Joserph's PU College, Hassan	2021 - 2023

PUBLICATIONS

Large Language Models Hallucinate and How Retrieval-Augmented Generation Mitigates It <i>International Journal for Research in Applied Science & Engineering Technology (IJRASET)</i>	Aug. 2026
---	------------------

EXPERIENCE

CCC Innovation and Incubation Center <i>NLP Intern</i>	Hassan, Karnataka 2024
--	---------------------------

- Developed an NLP-based chatbot to automate conversational interactions by using natural language processing and context-aware response generation.

PROJECTS

StoryVoiceAI – AI-Powered Storytelling & Audiobook Generator	GitHub
- Developed an offline-first AI storytelling platform using Next.js, TypeScript, and FastAPI, enabling audiobook generation without external API dependencies. - Fine-tuned a DistilRoBERTa model for dialogue emotion classification, achieving 93% validation accuracy. - Designed a hybrid offline Text-to-Speech (TTS) and procedural audio synthesis pipeline to generate distinct voices and audio for story characters.	
SmartPDF AI – Local-First Document Summarizer & Study Assistant	GitHub
- Developed a document AI application that generates summaries, quizzes, and flashcards from PDF and DOCX documents. - Built a custom Retrieval-Augmented Generation (RAG) pipeline using embeddings and vector search, achieving 95% retrieval accuracy on domain-specific queries. - Implemented Next.js 15, FastAPI, Server-Sent Events (SSE), and PDF.js for streaming document-based responses with source citations.	

TECHNICAL SKILLS

Programming	Python, JavaScript, Java, C++, SQL
Generative AI	Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Prompt Engineering, Embeddings, Semantic Search, Vector Search, LLM APIs
AI / Machine Learning	Natural Language Processing (NLP), Hugging Face, Scikit-learn, TensorFlow, Keras, Pandas, NumPy, OpenCV, Model Fine-Tuning
Vector Databases	ChromaDB, FAISS, Embedding Pipelines, Similarity Search
Databases / Tools	PostgreSQL, MySQL, MongoDB, Git, Docker, Docker Compose, Linux

ACHIEVEMENTS

- Participated in a Techathon at BGMIT, Mudhol.
- Participated in a hackathon at Bahubali College of Engineering (BCE).
- Published a journal called **Large Language Models Hallucinate and How Retrieval-Augmented Generation Mitigates It** in IJRASET
